
SLATESECURE

**LOWER RISK.
GREATER PEACE OF MIND.**

The threat landscape is expanding with the proliferation and connectivity of mobile devices, Bring Your Own Device (BYOD) and Internet of Things (IoT). Preventing and reacting to events is a responsibility with real business implications like potential down time, data loss and data theft.

IT security threats morph, evolve and advance faster every day, leaving your business vulnerable. We're prepared to protect your business and its assets with SlateSecure. As a managed service, you extend your staff and ability to manage threats and attacks, decreasing your vulnerabilities and quickly achieving peace of mind.

WHY SLATESECURE

1. Lower Costs

Significantly reduces initial investment, while also lowering the cost of staffing internal security and compliance specialists.

2. Simple Security Reporting

Provides accurate and timely reports for customers using best-in-class tools and processes.

3. Better Threat & Vulnerability Reporting

Detects suspicious behavior, identifies possible attacks by offering 24/7 alerting. Focused on items that are actionable by filtering out all the false positives. Through regular scans, reports and insights are provided by pointing out potential risks to give actionable intelligence, help target remediation efforts and improve your overall security posture.

4. Achieve Compliance

Log collection, retention and daily log reviews not only meet key compliance regulations but also help identify issues and threats quickly.

SLATESECURE MANAGER

Next generation Security Incident and Event Management (SIEM) service offers log collection, threat analytics, rapid alerting and reporting.

Provides broad visibility to help you more effectively see and mitigate security threats and validate compliance with numerous regulatory and industry standards.

Uses client's log and event data plus our advanced threat database and analytics engine to identify, categorize threats and alert you of any critical issue.

Daily log reviews optimize the alerting engine.

Executive and detailed reports are provided.

SLATESECURE SCANNER

A vulnerability scanner that assesses internal- and Internet-facing servers, workstations and network-attached devices for weaknesses.

Recurring diagnostic scan builds reports that define, identify and classify security risks.

Information including recommended patches, bug fixes and configuration changes are provided to assist in remediation when available.

Performs assessments at scheduled intervals with automated ticketing to provide tracking and auditing.

Reports provided give a priority of recommended action to help you quickly eliminate security vulnerabilities in your environment.
